About the Defence Industry Day

The aim for a Security & Defence industrial seminar with focus on innovation, is to strengthen the already solid link that Sweden and India maintains within the area. India and Sweden complement each other in many ways and aspects to make this development possible. By launching a “Defense Innovation Initiative”, between India & Sweden, we believe that we collaboratively will raise our ability to provide strong capabilities, in a cost-efficient way, with a reliable Security of Supply for the Swedish and Indian Armed Forces. The seminar aims to bring together innovative enterprises from the India and Sweden seeking to collaborate on mutual commercial benefit, not least SME:s. The activity will also focus on business-to-business.
