

Swedish-Italian DEFENCE DAY ON EDF

- an opportunity to
strengthen business
relations

WELCOME TO CONNECT

The EDF provides €8 billion over the years 2021-2027 for defence research and development in all operational and technological domains (land, sea, air, space, cyber, information, energy, materials, CBRN, etc.) through annual work programmes.

At the event, Italian OEMs will present technological clusters of interest and potential areas of cooperation with Swedish companies.

The event will also offer networking opportunities with the Italian OEMs offering the Swedish companies the opportunity to pitch ideas and expertise.

This is a great opportunity to forge winning defence research and development consortia as well as getting to know other participants in order to extend your international network and create strategic partnerships.
